EDUCATION

University of Washington

Ph.D. in Computer Science and Engineering

Advisors: Hank Levy and Arvind Krishnamurthy

Thesis: *Towards a Flexible, High-Performance Operating System for Mobile/Cloud Applications*

Seattle, WA

Sept 2017

University of Washington

M.S. in Computer Science and Engineering

Advisors: Hank Levy, Arvind Krishnamurthy, and Steve Gribble

Thesis: *Simplifying Mobile/Cloud Applications with Sapphire*

Seattle, WA

December 2013

Massachusetts Institute of Technology

M.Eng. in Electrical Engineering and Computer Science

Advisors: M. Frans Kaashoek and Jeremy Stribling

Thesis: *Efficient File Distribution in a Flexible, Wide-area File System*

Cambridge, MA

June 2009

Massachusetts Institute of Technology

S.B. in Computer Science and Engineering

Cambridge, MA

June 2008

INTERESTS

Operating systems, distributed systems, virtualization, and networking

RECENT

Capybara

SIGCOMM 2026

RESEARCH

A microsecond-scale load balancer that uses TCP migration to move established TCP connections between servers. Capybara uses a programmable switch to implement transparent L4 load balancing and a user-space TCP stack to encapsulate and move application-level state. Using this co-designed architecture, Capybara achieves up to 149x lower tail latency and more than 2x higher throughput for scale-out services compared to state-of-the-art load balancing approaches.

HIGHLIGHTS

Beehive

MICRO 2024

A flexible programmable NIC architecture designed to offload complex network protocols. The Beehive architecture uses a network-on-a-chip with message passing between protocol modules to dynamically scale up and add functionality to remove load from the CPU. This flexibility enables the co-design of microsecond-scale software network stacks and NIC offloads to minimize CPU usage and lower tail latencies.

Demikernel

SOSP 2021

A new datapath OS and architecture for microsecond-scale datacenter systems and kernel-bypass devices. Demikernel accommodates heterogeneous kernel-bypass devices with a flexible library OS architecture and new high-level datapath API with an asynchronous I/O interface and zero-copy memory semantics for microsecond I/O processing. Demikernel implements this API for RDMA, DPDK and SPDK devices with new nanosecond-scale I/O stacks in Rust. Once ported to Demikernel, microsecond datacenter systems can run across different devices with no code changes.

CONFERENCE

FELLOWSHIPS & AWARDS

ACM SIGOPS Dennis Ritchie Doctoral Dissertation Award	2018
UW CSE William Chan Memorial Dissertation Award	2018
Rising Stars Workshop	2016
NCWIT Collegiate Award, Runner-up	2016
Microsoft Research PhD Fellowship	2015
Google Anita Borg Memorial Fellowship	2015
Bob Bandes Teaching Award, Honorable Mention	2015
National Science Foundation Fellowship	2013
ARCS Foundation Fellowship	2012
Jeff Dean and Heidi Hopper Endowed Regental Fellowship	2012
CRA Outstanding Undergraduate Award, Honorable Mention	2008
UW CSE Industrial Affiliates Madrona Prize Runner-Up	2015
UW CSE Industrial Affiliates Madrona Prize	2014
